

Penetrant testing

PENCHECK✓

Reference test block for the global validation of your penetrant testing processes

Simple and economical, the Pencheck cracked test block is the ideal solution to verify the proper functioning of your entire penetrant testing cycle. Single-use, it guarantees reliable daily monitoring without any unpleasant surprises.

COMPLETE AND IMMEDIATE DIAGNOSTIC

At the end of the process, the visibility of the defects gives you a direct reading of your line's efficiency. The Pencheck allows you to simultaneously validate the quality of your products (penetrants and developers) and the rigor of your operations.

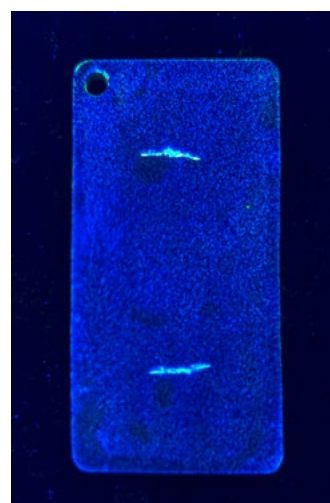

TECHNICAL DESIGN

High resistance and compatibility: made in France, our plastic test blocks are designed to resist almost all industrial penetrants, developers, and solvents on the market (note: they are not compatible with ketone family products, such as acetone).

Calibrated defects : each test block features two randomly shaped micro-defects on one of its faces. Once the penetrant cycle is applied, these indications are revealed with great clarity.

EASY INTEGRATION INTO YOUR WORKSHOPS

This tool naturally adapts to all your facilities (manual, semi-automatic, automatic lines, or on-site inspections). It simply attaches to each parts basket or hanger. For specific spray applications, these reference blocks can also be attached directly to each inspected part.

French manufacturer of NDT equipment and consumables

COMPLETE EXPERTISE FOR YOUR PENETRANT INSPECTIONS

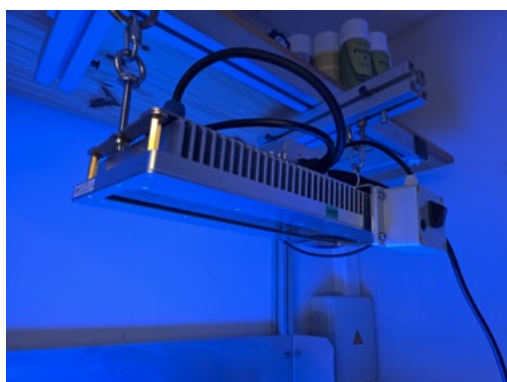

As an ISO 9001 certified French manufacturer, SREM Technologies supports you throughout your entire Non-Destructive Testing process. Beyond validation test blocks, we design and supply your complete penetrant testing line.

PENETRANT TESTING LINES (STANDARD OR CUSTOM-MADE)

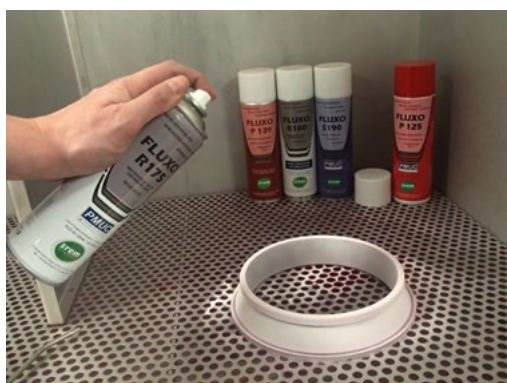

From compact manual stations to fully automated inspection lines, we design installations adapted to your production rates and part geometries. Our engineering department analyzes your specifications, whether you need a standard bench or a custom penetrant line, to offer ergonomic equipment compliant with the strictest industrial standards.

UV-A LIGHTING

To ensure optimal detection of indications during your inspections, we offer a comprehensive range of LED technology UV-A floodlights and lamps. Whether you need portable torches for on-site inspection or ceiling lights to equip your reading booths, our solutions ensure stable intensity, homogeneous coverage, and meet the requirements of the most demanding sectors such as aeronautics, nuclear...

FLUXO CONSUMABLES

SREM Technologies develops and manufactures its own brand of penetrant testing products: FLUXO.

Penetrants (color contrast and fluorescent), developers, and solvents: our range covers all sensitivity levels.

FLUXO products are approved by major prime contractors, formulated to offer exceptional contrast, and are perfectly compatible with your Pencheck test blocks. Many packaging sizes available, whether in aerosols or bulk.
